

Rationale

The military takeover in Myanmar, resulted in heightened mobility and displacement within the country as well as cross-border movement into neighboring countries, including Thailand. It became imperative to monitor these mobility dynamics in the region to inform response planning and advocacy as well as assistance towards the vulnerable Myanmar Nationals.

Methodology

IOM has activated its network of Key Informants in seven provinces in Thailand, namely Tak, Ranong, Mae Hong Son, Kachanaburi, Chiang Mai and Chiang Rai to collect information on estimates of Myanmar Nationals that moved into Thailand after the military takeover. Data is collected on a bi-weekly basis. The data collection began as phone surveys due to lack of access to these areas as COVID-19 restrictions were still in place. Eventually, by end of December 2021, as restrictions were being eased, a mixed method was adopted to collect the data i.e. face-to-face surveys by enumerators as well as phone surveys.

Collected data is also triangulated with other sources of data such as Centre for COVID-19 Situation Administration (CCSA) on apprehensions, Immigration Detention Centres (IDC) on detentions and Organizational Quarantine (OQ) data as well UNHCR data.

The data represented in this dashboard is from March 2021 until present. The dashboard will be updated, monthly, with new estimates.

Limitations

The data collected from key Informants are only indicative and not definite numbers. The data generated through mobility monitoring mechanism only gives indication on mobility trends in the Thai-Myanmar border. Moreover, data from other sources are not regularly available for triangulation.

How to use the dashboard?

To navigate within the dashboard, please take a look at the following considerations:

Navigation buttons

You can find them at the top right and left side of the page:

- ⬅ Click on it and go to the general information page
- ➡ Click on it and go to next
- ⬅ Click on it and go to previous

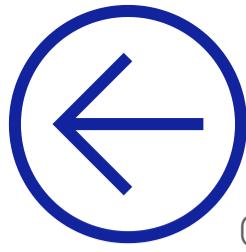

Filter function - Overview trends

In the dropdown menu, you can filter the data by year and month according to the year selected. In addition, you can select multiple options by pressing Ctrl + click.

Maps

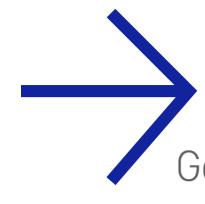

You can filter the graphs according to the province of your preferences by clicking on the willing feature.
